

On the Water for Sage 100

Connect, command, and control your overseas inventory from a single location

If you are a distributor importing goods, it can be difficult to know precisely what your inbound goods really are until they arrive. Consequently, inventory managers and their colleagues in accounting often have difficulty reconciling inbound goods against the appropriate Purchase Order and Line. They can struggle to record additional costs and get frustrated trying to differentiate between on-the-water inventory and on-hand inventory.

Streamline Workflows

- Receive inventory on containers & pallets within containers
- Choose to automatically receive
- Validate anticipated inventory
- Multiple POs scanned in as simple receipts

Eliminate the guesswork around incoming inventory.

Know where your overseas inventory is at all times with Scanco's On The Water app for Sage 100. Empower your team to make informed decisions with the full visibility that On the Water brings.

Take advantage of the License Plate feature to track pallets in containers using scanning technology. Our application will give you the breadth and depth you need in an app to seamlessly manage inventory overseas and in the warehouse.
