

Scanco Purchase Agent for Sage 100

Avoid material shortages and optimize cash flow.

Purchase Agent intelligently analyzes your supply and demand to help you buy the right products at the right time. A lean operation has the right materials available to fill the current demand without stocking costly excess inventory. This is an ideal that can be hard to achieve without the right tools.

Control & Efficiency

- Get Faster Insight
- Increase Efficiency
- Optimize Cash Flow
- Avoid Shortages
- Retain Full Control
- Integrate with Work Order

The right quantity at the right time!

By analyzing orders, minimum stock requirements, current supply, quantities on purchase order, and optional MRP projections, Purchase Agent creates a to-do list of the materials that need to be purchased.

The list is then presented in an easy-to-read graphical table format, ready for your buyer to review, edit, and act upon. Purchase Agent will even generate purchase orders with the click of a button.

Sales Order

- Customer Demand
- Required Dates

Inventory

- On Hand Qty
- Reorder Point & Stocking Levels

Purchase Order

- Open PO's
- Multiple Vendor Pricing Options

MRP

- Manual Projections
- Optional Module

Pa
purchase agent

1 Create Your Demand Fence

- ✓ You tell Purchase Agent how far into the future to review demand, plus which items, warehouse, customers, etc. should be analyzed.

2 Explodes BOM Components

- ✓ When used with Sage 100 Bill of Material module, Purchase Agent will explode multi-level bills.

3 Works With MRP

- ✓ When used with the Sage 100 MRP module, items with manually entered quantity projections are considered in the quantity calculations.

4 Interactive Worksheet Grid

- ✓ Intuitive spreadsheet-style grid speeds navigation and provides an easy-to-digest graphical interpretation of demand.

5 Drill Down For Details

- ✓ Pick an item and drill down to see a detailed listing of its reorder point and demand points.

6 Dynamic Data Interaction

- ✓ Direct connection to the database from the work grid allows the user to select or change the vendors and order quantities.
- ✓ Filter the view for items requiring action or items requiring no action and more.

7 You Retain Control

- ✓ Purchase Agent can be run to calculate requirements for all inventory items, a range of inventory items, discrete product lines, discrete warehouses, and parts only assigned to certain buyers. Any item can be put on hold or removed.

8 Flexible Purchase Order Creation

- ✓ Select individual items or groups of items for order generation. Purchase Order then adds these items to existing Purchase orders or an entirely new order. The item drops off the grid to prevent duplication.
- ✓ The entire work grid can be cleared and quickly regenerated at any time.
