

Wave & Directed Picking

Picking has never been so simple

Picking processes account for more than fifty percent of warehouse management operational costs. Since significant overhead and resources are required, improvements create an efficient, low cost and safe warehouse process. Scanco gives end users the best of both worlds with our Wave & Directed Picking application. Eliminate the paper pick ticket and track orders that your warehouse processes daily, with ease. Coupled with Scanco Warehouse, Wave & Directed picking takes the guess work out of where to go in your warehouse and gives you the capability to group multiple orders from one screen to optimize your picking process with intelligent warehouse mapping. The application is designed to walk your team through what orders to pick, where to go, the item to scan and what quantities they take out of each location.

Pick More Orders, Faster, Without Paper

- 1 Group Multiple Orders
- 2 Intelligent warehouse mapping with direction guidance
- 3 User guidance on what to scan
- 4 Stage product to pack later
- 5 View what has been staged in Sage 100
- 6 Real-time reporting of what is in the picking process
- 7 Eliminate shipping errors by scanning what you are picking
- 8 Live validation within Sage 100
- 9 Orders pushed instantly from Sage 100 to Scanco's application upon creation
