

Enhanced Shipping

By bundling together an array of robust features, your warehouse will operate more efficiently than ever and have a high level of control over inventory.

ADVANCED

SHIPPING ENHANCEMENT

- 1 WAVE/ORDER PICKING:** Directed picking guides the user through the warehouse by bin location for all items on single or multiple Sales Orders. The user stages each of the SO or items picked within a specified bin location.
- 2 INVOICE PICKING:** After entering the Sales Order and items picked, this information will send back to Sage Invoice Data Entry. This module is used in conjunction with Scanco Wave Picking and Order Picking.
- 3 DIRECTED SHIPPING:** Multi-order directed shipping guides the user through the warehouse by bin location, once, for all items on multiple Sales Orders and is sent to Sage Shipping Data Entry.

EVEN MORE

WITH A MULTI-BIN SYSTEM

- 4 QUICK PICK:** Single order picking for all items in all warehouse codes. Allocations create in the bin where items are picked, allowing you to pack items and ship them from either Scanco Shipping, Scanco Ship Picked, Scanco Invoicing, or Sage Shipping Data Entry.
- 5 CONFIRM PICK:** Multi-order directed picking confirms the quantities picked, guides the user through the warehouse by bin location and transferred pre-allocated items from one/multiple bin location into one bin location.
- 6 COMPATIBILITY WITH MULTI-BIN:** The power and flexibility gained from integrating Multi-Bin is extended on the handheld with Scanco Warehouse.
